

Advanced Machine Vision System Cameras, Industrial Barcode Readers and Safety Scanners Repair

Repair Service Full System Test and Warranty

Our engineers have developed a proprietary repair process that allows us to quickly diagnose and repair your camera systems. Component failure, internal contamination and overheating problems are common in many camera systems. We have engineered solutions that keep these recurring problems from plaguing your manufacturing environment.

Our comprehensive System Tests include programmed steps that exceed temperatures that often trigger High Heat failures, particularly in the Micro Series Camera's. Utilizing the In-Sight Explorer Software and Visionview system, your repaired Cognex Camera is tested for full functionality.

We offer "Actual Repair Evaluations" and the highest level of customer service on all your Industrial Electronic Repair needs. You will receive personalized service and NO initial evaluation fees on all repair items.

- We are less costly; substantial savings over buying new.
- FREE actual evaluations
- FREE Detailed Repair Report provided with every repair
- Much better warranty period – our 1-year all-inclusive in-service warranty compared to 3-months from date of shipment from most manufacturers
- We repair and support most legacy systems; eliminating the need for an upgrade to a new, expensive unit
- We repair all barcode readers and scanners
- Full System Testing Capabilities
- Personal Support Including Order Status and Quotations
